JOURNAL OF AIRCRAFT
Volume 32, No. 6, November–December 1995

1995 *Journal of Aircraft* Index

How to Use the Index

In the Subject Index, pages 1416–1422, each technical paper is listed under a maximum of three appropriate headings. Note the number in boldface type following each paper title, and use that number to locate the paper in the Chronological Index. The Author Index, pages 1423 and 1424, lists all authors associated with a given technical paper. The locating numbers are identical to those in the Subject Index. The Chronological Index, pages 1425–1432, lists all papers by their unique code numbers. This listing contains titles, authors and their affiliations, and volume, issue number, and page where the paper appeared. It also gives the AIAA paper number, if any, on which the article was based, as well as the "CP" or conference volume number if the paper was published in a bound collection of meetings papers. Comments, Replies, and Errata are listed directly beneath the paper to which they refer. If the paper to which they refer was published prior to 1995, that paper also will appear in the Chronological Index. Authors of Comments also are listed in the Author Index.

Subject Index

Aircraft Technology, Conventional, STOL/VTOL

Aerodynamics

Comment on "Inverse Solutions of the Prandtl–Meyer Function" C94-221
Reply by the Authors to G. Emanuel C94-221
Dynamic Investigation of the Angular Motion of a Rotating Body-Parachute System C95-012
Stability Derivatives of a Flapped Plate in Unsteady Ground Effect C95-017
Natural Laminar Flow Wing Concept for Supersonic Transports C95-018
Aerodynamics of a Finite Wing with Simulated Ice C95-019
Response of a Nonrotating Rotor Blade to Lateral Turbulence Part I: Theory C95-020
Response of a Nonrotating Rotor Blade to Lateral Turbulence Part II: Experiment C95-021
Circulation Control Wing Model Study C95-030
Simplified Tunnel Correction Method C95-031
Pressure-Sensitive Paint Measurements on a Supersonic High-Sweep Oblique Wing Model C95-033
Global Nonlinear Aerodynamic Modeling Using Multivariate Orthogonal Functions C95-038
Wind-Tunnel Measurements of Hazard Posed by Lift-Generated Wakes C95-039
Finite State Induced Flow Models Part I: Two-Dimensional Thin Airfoil C95-044
Finite State Induced Flow Models Part II: Three-Dimensional Rotor Disk C95-045
Computation of Passively Controlled Transonic Wing C95-048
Case for Aircraft with Outboard Horizontal Stabilizers C95-055
Aerodynamic Characteristics of Vortex Flaps on a Double-Delta Planform C95-065
Influence of Sideslip on Double Delta Wing Aerodynamics C95-066
Numerical Investigation of High Incidence Flow over a Double-Delta Wing C95-068
Quantifiable Vortex Features of F-106B Aircraft at Subsonic Speeds C95-069
Spectral Mapping of Quasiperiodic Structures in a Vortex Flow C95-073
Correlation of Unsteady Pressure and Inflow Velocity Fields of a Pitching Rotor Blade C95-077
In-Flight Pressure Measurements on a Subsonic Transport High-Lift Wing Section C95-078
Actuated Forebody Strake Controls for the F-18 High-Alpha Research Vehicle C95-081
Operational and Research Aspects of a Radio-Controlled Model Flight Test Program C95-085
Directional Control at High Angles of Attack Using Blowing Through a Chined Forebody C95-087
Navier–Stokes Applications to High-Lift Airfoil Analysis C95-090
Analysis of Low Reynolds Number Airfoil Flows C95-091
Lift-Enhancing Tabs on Multielement Airfoils C95-095
Effect of Leading-Edge Extension Fences on the Vortex Wake of an F/A-18 Model C95-100
Estimation of Supersonic Leading-Edge Thrust by a Euler Flow Model C95-102
Natural-Laminar-Flow Airfoil for General-Aviation Applications C95-107
Numerical Analysis of the Vortical Flow Around a Delta Wing-Canard Configuration C95-108
Vortex Control over Sharp-Edged Slender Bodies C95-111
Subsonic Wing Planform Design Using Multidisciplinary Optimization C95-112
Flow Developments Above 50-Deg Sweep Delta Wings with Different Leading-Edge Profiles C95-118
Delta Wing Vortex Control via Recessed Angled Spanwise Blowing C95-120
Computational Investigation of Tangential Slot Blowing on a Generic Chined Forebody C95-121
Experimental Investigation of Tangential Slot Blowing on a Generic Chined Forebody C95-122
Drag Prediction at Subsonic and Transonic Speeds Using Euler Methods C95-125
Canard Tip Vortex Splitting in a Canard–Wing Configuration: Experimental Observations C95-130
Computational Study of a Conical Unit Aspect Ratio Wing at Supersonic Speeds C95-131
Effects of Spanwise Blowing on a Delta Wing with Vortex Flaps C95-134
Probe Interference on Flow Measurements in Propeller near Slipstream C95-135
Genetic Algorithms Applied to the Aerodynamic Design of Transonic Airfoils C95-136
Forebody Vortex Control Using Nose-Boom Strakes C95-139
Improvement of Transonic Wing Buffet by Geometric Modifications C95-141
Rotor Aerodynamic Loads Computation Using a Constant Vorticity Contour Free Wake Model C95-143
Pitch Rate and Pitch-Axis Location Effects on Vortex Breakdown Onset C95-145
Compressibility Effects on Vortex Breakdown Onset Above a 75-Degree Sweep Delta Wing C95-146
Momentum, Pressure, and Energy in the Trefftz-Plane C95-147
Effect of Blade-Tip Planform on Shock Wave of Advancing Helicopter Blade C95-148
Vortex-in-Cell Analysis of Wing Wake Roll-Up C95-149
Aerodynamics and Acoustics of Rotor Blade-Vortex Interactions C95-150
Vortex Asymmetry and Induced Side Forces on Elliptic Cones at High Incidence C95-156
Wing Performance in Moderate Rain C95-158
Development of Transonic Area-Rule Methodology C95-161
Experimental Investigation of a Three-Dimensional Dynamic Stall Model Oscillating in Pitch C95-162
Experimental Study of Lift-Enhancing Tabs on a Two-Element Airfoil C95-163
Viscous Flow Past a Nacelle in Proximity to a Flat Plate C95-172
Oscillatory Behavior of Helicopter Rotor Airloads in the Blade Stall Regime C95-176
Effects of Large Blockage in Wind-Tunnel Testing C95-177
Unstructured Euler Flutter Analysis of Two-Dimensional Wing–Tail Configuration C95-178
Preconditioned Generalized Minimum Residual Acceleration of Panel Methods C95-179
Effect of Canard Oscillations on an X-31A-Like Model in Pitching Maneuver C95-180
Effects of Delta Planform Tip Sail Incidence and Arrangement on Wing Performance C95-181
Wake Integration to Predict Wing Span Loading from a Numerical Simulation C95-183
Real-Time Model of Three-Dimensional Dynamic Reattachment Using Neural Networks C95-185
Rear Fuselage Flow Studies on a Modern Transonic Transport Aircraft C95-186
Trailing Vortex Effects on Large Receiver Aircraft C95-188
Neural Network Prediction and Control of Three-Dimensional Unsteady Separated Flowfields C95-190
Grid Sensitivity and Aerodynamic Optimization of Generic Airfoils C95-193
Navier–Stokes Computations and Experimental Comparisons for Multielement Airfoil Configurations C95-195
Validation of Vortex–Lattice Method for Loads on Wings in Lift-Generated Wakes C95-196
Rotor Free-Wake Modeling Using a Psuedoimplicit Relaxation Algorithm C95-199
Double-Delta-Wing Aerodynamics for Pitching Motions With and Without Sideslip C95-203
Effects of a Closely Coupled Static and Oscillating Canard C95-214
Vortex Burst Model for the Vortex Lattice Method C95-216
Computation of Compressible, Laminar Boundary Layers on Swept, Tapered Wings C95-219

Aeroelasticity and Aeroservoelasticity

Summary of an Active Flexible Wing Program C95-001
Simulation and Model Reduction for the Active Flexible Wing Program C95-003
Multiple-Function Digital Controller System for Active Flexible Wing Wind-Tunnel Model C95-004
Design and Multifunction Tests of a Frequency Domain-Based Active Flutter Suppression System C95-007
Flutter Suppression for the Active Flexible Wing: A Classical Design C95-008
Rolling Maneuver Load Alleviation Using Active Controls C95-009
Application of Navier-Stokes Aeroelastic Methods to Improve Fighter Wing Maneuver Performance C95-010
Response of a Nonrotating Rotor Blade to Lateral Turbulence Part I: Theory C95-020
Response of a Nonrotating Rotor Blade to Lateral Turbulence Part II: Experiment C95-021
Digital Flutter Suppression of Active Flexible Wing Using Moment Feedback C95-028
Maneuver Load Control Using Optimized Feedforward Commands C95-029
Multidisciplinary Design Integration Methodology for a Supersonic Transport Aircraft C95-041
Finite State Induced Flow Models Part I: Two-Dimensional Thin Airfoil C95-044
Finite State Induced Flow Models Part II: Three-Dimensional Rotor Disk C95-045
Multiple Order Pole Pure Lag Rational Function Approximations for Unsteady Aerodynamics C95-046
Impact of Aeroelastic-Propulsive Interactions on Flight Dynamics of a Hypersonic Vehicle C95-049
Correlation of Unsteady Pressure and Inflow Velocity Fields of a Pitching Rotor Blade C95-077

Structural Dynamic Loads in Response to Impulsive Excitation C95-127
Aeroelastic Effects on the B-2 Maneuver Response C95-128
Aeroelastic Analysis of a Flexible Control Surface with Structural Nonlinearity C95-129
Shape Sensitivity Analysis of Divergence Dynamic Pressure C95-140
Experimental and Analytical Investigation of Transonic Limit-Cycle Oscillations of a Flaperon C95-142
Matched-Filter and Stochastic-Simulation-Based Methods of Gust Loads Prediction C95-160
Experimental Investigation of a Three-Dimensional Dynamic Stall Model Oscillating in Pitch C95-162
Aeroelastic Actuation Using Elastic and Induced Strain Anisotropy C95-170
Oscillatory Behavior of Helicopter Rotor Airloads in the Blade Stall Regime C95-176
Unstructured Euler Flutter Analysis of Two-Dimensional Wing–Tail Configuration C95-178
Transonic Aeroelastic Models of Highly Swept Hypersonic Lifting Surfaces C95-184
Navier–Stokes Computations on Full Wing–Body Configuration with Oscillating Control Surfaces C95-192
Aeroelastic Optimization of a Helicopter Rotor with Composite Coupling C95-206

Aerospace Plane

Impact of Aeroelastic-Propulsive Interactions on Flight Dynamics of a Hypersonic Vehicle C95-049
Cooling of Aerospace Plane Using Liquid Hydrogen and Methane C95-079
Transonic Aeroelastic Models of Highly Swept Hypersonic Lifting Surfaces C95-184
Computational Inlet-Fairing Effects and Plume Characterization on a Hypersonic Powered Model C95-194

Civil Missions and Transportation

Real-Time Estimation of Atmospheric Turbulence Severity from In-Situ Aircraft Measurements C95-023
Fundamentals of Catastrophic Failure Prevention by Thrust Vectoring C95-084
Acoustics of a Counter-Rotating Shrouded Propfan: Prediction and Data C95-153
Practical Design of an Airship C95-201

Configuration Design

Comment on "Aircraft Landing Gear Positioning Concerning Abnormal Landing Cases" C94-060
Reply by the Authors to D. H. Chester C94-060
CFD-Based Aerodynamic Approximation Concepts Optimization of a Two-Dimensional Scramjet Vehicle C95-037
Case for Aircraft with Outboard Horizontal Stabilizers C95-055
Economic Parameters in the Conceptual Design Optimization of an Air-Taxi Aircraft C95-105
Design Analysis Methodology for Solar-Powered Aircraft C95-106
Subsonic Wing Planform Design Using Multidisciplinary Optimization C95-112
Genetic Algorithms Applied to the Aerodynamic Design of Transonic Airfoils C95-136
Inverse Method for Airfoil Design C95-154
Wedge-Cone Waverider Configuration for Engine-Airframe Integration C95-173
Grid Sensitivity and Aerodynamic Optimization of Generic Airfoils C95-193
Practical Design of an Airship C95-201
Sizing Methodology for Reaction-Driven, Stopped-Rotor Vertical Takeoff and Landing Concepts C95-211
Effects of a Closely Coupled Static and Oscillating Canard C95-214
Vortex Burst Model for the Vortex Lattice Method C95-216

Deceleration Systems

Stable Cross-Type Parachute with Inflation Aid C95-138

Economics

Economic Parameters in the Conceptual Design Optimization of an Air-Taxi Aircraft C95-105

Flight Control Integration

When In-Flight Simulation is Necessary C95-057

Flight Mechanics

Interpretation of Experimental High-Alpha Aerodynamics—Implications for Flight Prediction C95-036
Aircraft with Single-Axis Aerodynamically Deployed Wings C95-047
Possible "Impossible" Turn C95-054
Robust and Efficient Trimming Algorithm for Application to Advanced Mathematical Models of Rotorcraft C95-061
Jet Transport Response to a Horizontal Wind Vortex C95-071
Cooling of Aerospace Plane Using Liquid Hydrogen and Methane C95-079
Actuated Forebody Strake Controls for the F-18 High-Alpha Research Vehicle C95-081
Parameter Identification and Modeling of Longitudinal Aerodynamics C95-109
Near Real-Time Approach to Statistical Flight Test C95-117
Experimental Investigation of Tangential Slot Blowing on a Generic Chined Forebody C95-122
Inertia-Coupled Coordinated Roll Maneuvers of Airplanes C95-133
Application of an Artificial Neural Network as a Flight Test Data Estimator C95-165
Batch Simulation Environment for Integrated Batch and Piloted Air Combat Analysis C95-197
Center of Gravity and Minimal Lift Coefficient Limits of a Gliding Parachute C95-202
Multipoint Approach for Aerodynamic Modeling in Complex Flowfields C95-207
Estimation of the Moment Coefficients for Dynamically Scaled, Free-Spinning Wind-Tunnel Models C95-221
Validation of a Multipoint Approach for Modeling Spin Aerodynamics C95-222

Flight Operations

Possible "Impossible" Turn C95-054

General Aviation

Possible "Impossible" Turn C95-054
Flight Test Certification of Primary Category Aircraft Using TP101-41E Sportplane Design Standard C95-092
Natural-Laminar-Flow Airfoil for General-Aviation Applications C95-107
Wing Performance in Moderate Rain C95-158
Practical Design of an Airship C95-201
Multipoint Approach for Aerodynamic Modeling in Complex Flowfields C95-207
Validation of a Multipoint Approach for Modeling Spin Aerodynamics C95-222

Ground Support

Simplified Tunnel Correction Method C95-031

Landing Dynamics

Comment on "Aircraft Landing Gear Positioning Concerning Abnormal Landing Cases" C94-060
Reply by the Authors to D. H. Chester C94-060
Study of the Pressure Distribution on an Aircraft Tire–Wheel Interface C95-144

Manufacturing

Equilibrium of Bolted Joints Subjected to In-Plane External Loading C95-169

Military Missions

Network Load in Distributed Interactive Simulation C95-215
Kill Probability in Antiaircraft Firing Theory C95-217

Noise

Numerical Study of a Supersonic Open Cavity Flow and Pressure Oscillation Control C95-050
Signal Processing of Noise Data from High-Speed Flyovers C95-086
Estimating Noise Characteristics from Flight Test Data Using Optimal Fourier Smoothing C95-104
Inlet Acoustic Mode Measurements Using a Continuously Rotating Rake C95-114
Acoustics of a Counter-Rotating Shrouded Propfan: Prediction and Data C95-153
De-Dopplerization of Aircraft Acoustic Signals C95-155

Performance

Evaluation of Several Agility Metrics for Fighter Aircraft Using Optimal Trajectory Analysis C95-110
Monitoring Airplane Takeoff Performance: Prototype Instrument with Learning Capability C95-115

Powerplant Integration

Erosion of Dust-Filtered Helicopter Turbine Engines Part II: Erosion Reduction C95-015
Life Prediction of Helicopter Engines Fitted with Dust Filters C95-016
Wedge-Cone Waverider Configuration for Engine-Airframe Integration C95-173
Visualization of Choked Supersonic Flow-Through Engine Nacelles C95-174
Sizing Methodology for Reaction-Driven, Stopped-Rotor Vertical Takeoff and Landing Concepts C95-211

Propeller and Rotor Systems

Comment on "Simple Equations for Helical Vortex Wakes" C94-148
Reply by the Author to A. H. Flax C94-148
Probe Interference on Flow Measurements in Propeller near Slipstream C95-135

Evaluation of Blockage Interference on Propellers in a Perforated-Wall Wind Tunnel C95-164
Oscillatory Behavior of Helicopter Rotor Airloads in the Blade Stall Regime C95-176
Rotor Free-Wake Modeling Using a Psuedoimplicit Relaxation Algorithm C95-199
Accuracy of a Propeller Model in Inviscid Flow C95-204

Rotorcraft

Erosion of Dust-Filtered Helicopter Turbine Engines Part II: Erosion Reduction C95-015
Life Prediction of Helicopter Engines Fitted with Dust Filters C95-016
Finite State Induced Flow Models Part I: Two-Dimensional Thin Airfoil C95-044
Finite State Induced Flow Models Part II: Three-Dimensional Rotor Disk C95-045
Acoustic Spinning-Mode Analysis by an Iterative Threshold Method C95-052
Robust and Efficient Trimming Algorithm for Application to Advanced Mathematical Models of Rotorcraft C95-061
Performance Benefit of Second Harmonic Control in Helicopters C95-062
Correlation of Unsteady Pressure and Inflow Velocity Fields of a Pitching Rotor Blade C95-077
Unstructured Adaptive Mesh Computations of Rotorcraft High-Speed Impulsive Noise C95-113
Rotor Aerodynamic Loads Computation Using a Constant Vorticity Contour Free Wake Model C95-143
Effect of Blade-Tip Planform on Shock Wave of Advancing Helicopter Blade C95-148
Aerodynamics and Acoustics of Rotor Blade-Vortex Interactions C95-150
Decomposition-Based Optimization Procedure for High-Speed Prop-Rotors Using Composite Tailoring C95-157
Aeroelastic Optimization of a Helicopter Rotor with Composite Coupling C95-206
Sizing Methodology for Reaction-Driven, Stopped-Rotor Vertical Takeoff and Landing Concepts C95-211

Safety

Comment on "Aircraft Landing Gear Positioning Concerning Abnormal Landing Cases" C94-060
Reply by the Authors to D. H. Chester C94-060
Wind-Tunnel Measurements of Hazard Posed by Lift-Generated Wakes C95-039
Study of the Pressure Distribution on an Aircraft Tire–Wheel Interface C95-144

Simulation

Simulation and Model Reduction for the Active Flexible Wing Program C95-003
Performance Benefit of Second Harmonic Control in Helicopters C95-062
Event Correlation for Networked Simulators C95-076
Prediction of Airplane States C95-082
Assessment of Technology for Aircraft Development C95-089
Aeroelastic Effects on the B-2 Maneuver Response C95-128
Dihedral for Spiral Stability C95-137
Batch Simulation Environment for Integrated Batch and Piloted Air Combat Analysis C95-197
Network Load in Distributed Interactive Simulation C95-215

STOL/VTOL/STOVL

Circulation Control Wing Model Study C95-030
Critical Considerations for Helicopters During Runway Takeoffs C95-116
Decomposition-Based Optimization Procedure for High-Speed Prop-Rotors Using Composite Tailoring C95-157

Structural Design (Including Loads)

Real-Time Estimation of Atmospheric Turbulence Severity from In-Situ Aircraft Measurements C95-023
Evolution of Airplane Gust Loads Design Requirements C95-035
Wing Leading-Edge Design Concepts for Air-breathing Hypersonic Waveriders C95-043
Concurrent Engineering in Design of Aircraft Structures C95-059
Statistical Discrete Gust–Power Spectral Density Methods Overlap—Holistic Proof and Beyond C95-083
Fundamentals of Catastrophic Failure Prevention by Thrust Vectoring C95-084
Neural Network Approach to Fatigue-Crack-Growth Predictions Under Aircraft Spectrum Loadings C95-123
Matched-Filter and Stochastic-Simulation-Based Methods of Gust Loads Prediction C95-160
Analytic Sensitivity and Approximation of Skin Buckling Constraints in Wing-Shape Synthesis C95-167
Equilibrium of Bolted Joints Subjected to In-Plane External Loading C95-169

Structural Materials

Damage Tolerance Certification of a Fighter Horizontal Stabilizer C95-094

System Effectiveness

Concurrent Engineering in Design of Aircraft Structures C95-059

Testing, Flight and Ground

Study of the Droplet Spray Characteristics of a Subsonic Wind Tunnel C95-027
Pressure-Sensitive Paint Measurements on a Supersonic High-Sweep Oblique Wing Model C95-033
Interpretation of Experimental High-Alpha Aerodynamics—Implications for Flight Prediction C95-036
When In-Flight Simulation is Necessary C95-057
Operational and Research Aspects of a Radio-Controlled Model Flight Test Program C95-085
Signal Processing of Noise Data from High-Speed Flyovers C95-086
Flight Test Certification of Primary Category Aircraft Using TP101-41E Sportplane Design Standard C95-092
Estimating Noise Characteristics from Flight Test Data Using Optimal Fourier Smoothing C95-104
Near Real-Time Approach to Statistical Flight Test C95-117
Evaluation of Blockage Interference on Propellers in a Perforated-Wall Wind Tunnel C95-164
Application of an Artificial Neural Network as a Flight Test Data Estimator C95-165
Effects of Large Blockage in Wind-Tunnel Testing C95-177
Wall Temperature Effects on the Stability of Laminar Boundary Layers C95-182
Surface Reflective Visualization System Study to Vortical Flow over Delta Wings C95-210

Vibration

Aeroelastic Analysis of a Flexible Control Surface with Structural Nonlinearity C95-129

Weather Hazards

Tracking of Raindrops in Flow over an Airfoil C95-013
Real-Time Estimation of Atmospheric Turbulence Severity from In-Situ Aircraft Measurements C95-023
Wing Performance in Moderate Rain C95-158

Energy

Photovoltaic Power

Design Analysis Methodology for Solar-Powered Aircraft C95-106

Solar Power

Design Analysis Methodology for Solar-Powered Aircraft C95-106

Wind Power

Comment on "Simple Equations for Helical Vortex Wakes" C94-148
Reply by the Author to A. H. Flax C94-148

Fluid Dynamics

Aeroacoustics

Signal Processing of Noise Data from High-Speed Flyovers C95-086
Unstructured Adaptive Mesh Computations of Rotorcraft High-Speed Impulsive Noise C95-113
Inlet Acoustic Mode Measurements Using a Continuously Rotating Rake C95-114
Aerodynamics and Acoustics of Rotor Blade-Vortex Interactions C95-150
De-Dopplerization of Aircraft Acoustic Signals C95-155

Boundary Layers and Heat Transfer—Laminar

Hypersonic Inviscid and Viscous Flow over a Wedge and Cone C95-053
Computation of Compressible, Laminar Boundary Layers on Swept, Tapered Wings C95-219

Boundary Layers and Heat Transfer—Turbulent

Natural Laminar Flow Wing Concept for Supersonic Transports C95-018

Boundary-Layer Stability and Transition

Wall Temperature Effects on the Stability of Laminar Boundary Layers C95-182

Computational Fluid Dynamics

Application of Transonic Small Disturbance Theory to the Active Flexible Wing Model C95-002
Application of Navier-Stokes Aeroelastic Methods to Improve Fighter Wing Maneuver Performance C95-010

Tracking of Raindrops in Flow over an Airfoil C95-013
Aerodynamic Characteristics of External Store Configurations at Low Speeds C95-022
CFD-Based Aerodynamic Approximation Concepts Optimization of a Two-Dimensional Scramjet Vehicle C95-037
Numerical Study of a Supersonic Open Cavity Flow and Pressure Oscillation Control C95-050
Wing Flutter Boundary Prediction Using Unsteady Euler Aerodynamic Method C95-058
Applicability of Newtonian and Linear Theory to Slender Hypersonic Bodies C95-064
Numerical Investigation of High Incidence Flow over a Double-Delta Wing C95-068
Computation of Delta-Wing Roll Manuevers C95-072
Comparison of the Predictive Capabilities of Several Turbulence Models C95-075
Navier–Stokes Applications to High-Lift Airfoil Analysis C95-090
Analysis of Low Reynolds Number Airfoil Flows C95-091
Turbulent Effects on Parachute Drag C95-101
Estimation of Supersonic Leading-Edge Thrust by a Euler Flow Model C95-102
Computation of Vortex Breakdown on a Rolling Delta Wing C95-103
Unstructured Adaptive Mesh Computations of Rotorcraft High-Speed Impulsive Noise C95-113
Computational Investigation of Tangential Slot Blowing on a Generic Chined Forebody C95-121
Drag Prediction at Subsonic and Transonic Speeds Using Euler Methods C95-125
Computation of a Controlled Store Separation from a Cavity C95-126
Computational Study of a Conical Unit Aspect Ratio Wing at Supersonic Speeds C95-131
Improvement of Transonic Wing Buffet by Geometric Modifications C95-141
Vortex-in-Cell Analysis of Wing Wake Roll-Up C95-149
Inverse Method for Airfoil Design C95-154
Analysis of Tangential Slot Blowing on F/A-18 Isolated Forebody C95-159
Development of Transonic Area-Rule Methodology C95-161
Co- and Contrarotating Streamwise Vortices in a Turbulent Boundary Layer C95-166
Unstructured Euler Flutter Analysis of Two-Dimensional Wing–Tail Configuration C95-178
Preconditioned Generalized Minimum Residual Acceleration of Panel Methods C95-179
Wake Integration to Predict Wing Span Loading from a Numerical Simulation C95-183
Grid Sensitivity and Aerodynamic Optimization of Generic Airfoils C95-193
Computational Inlet-Fairing Effects and Plume Characterization on a Hypersonic Powered Model C95-194
Unsteady Characteristics of a Hypersonic Type IV Shock Interaction C95-200
Accuracy of a Propeller Model in Inviscid Flow C95-204
Conservative Multiblock Navier–Stokes Solver for Arbitrarily Deforming Geometries C95-208
Numerical Study of Alternate Forms of Dynamic-Stall-Vortex Suppression C95-220

Hypersonic Flow

Comment on "Inverse Solutions of the Prandtl–Meyer Function" C94-221
Reply by the Authors to G. Emanuel C94-221
Hypersonic Inviscid and Viscous Flow over a Wedge and Cone C95-053
Applicability of Newtonian and Linear Theory to Slender Hypersonic Bodies C95-064
Aerodynamic Applications of Underexpanded Hypersonic Viscous Jets C95-070
Stability Derivatives for a Hypersonic Caret-Wing Waverider C95-119
Wedge-Cone Waverider Configuration for Engine-Airframe Integration C95-173
Computational Inlet-Fairing Effects and Plume Characterization on a Hypersonic Powered Model C95-194
Unsteady Characteristics of a Hypersonic Type IV Shock Interaction C95-200

Inlet, Nozzle, Diffuser, and Channel Flows

CFD-Based Aerodynamic Approximation Concepts Optimization of a Two-Dimensional Scramjet Vehicle C95-037
Visualization of Choked Supersonic Flow-Through Engine Nacelles C95-174

Jets, Wakes, and Viscid-Inviscid Flow Interactions

Wind-Tunnel Measurements of Hazard Posed by Lift-Generated Wakes C95-039
Canard Tip Vortex Splitting in a Canard–Wing Configuration: Experimental Observations C95-130
Momentum, Pressure, and Energy in the Trefftz-Plane C95-147
Co- and Contrarotating Streamwise Vortices in a Turbulent Boundary Layer C95-166
Asymptotic Expression of the Forces Induced by a Strong Jet in a Crossflow C95-171

Rarefied Flows

Aerodynamic Applications of Underexpanded Hypersonic Viscous Jets C95-070

Separated Flows

Comment on "Physics of Coanda Jet Detachment at High-Pressure Ratio" C94-087
Aerodynamic Characteristics of External Store Configurations at Low Speeds C95-022
Cobra Maneuver Unsteady Aerodynamic Considerations C95-032
Interpretation of Experimental High-Alpha Aerodynamics—Implications for Flight Prediction C95-036
Directional Control at High Angles of Attack Using Blowing Through a Chined Forebody C95-087
Flow Physics of Critical States for Rolling Delta Wings C95-088
Flow Developments Above 50-Deg Sweep Delta Wings with Different Leading-Edge Profiles C95-118
Experimental Investigation of Tangential Slot Blowing on a Generic Chined Forebody C95-122
Pitch Rate and Pitch-Axis Location Effects on Vortex Breakdown Onset C95-145
Analysis of Rolled Delta Wing Flows Using Effective Sweep and Attack Angles C95-151
Effects of Strakes on a Glancing Shock Wave/Turbulent Boundary-Layer Interaction C95-152
Origin of Computed Unsteadiness in the Shear Layer of Delta Wings C95-175
Rear Fuselage Flow Studies on a Modern Transonic Transport Aircraft C95-186
Dynamic Airfoil Flow Separation and Reattachment C95-187
Flat Spin of Axisymmetric Bodies C95-189
Wing Rock Analysis of Slender Delta Wings, Review and Extension C95-191
Correlation of F/A-18 Buffeting from Wind-Tunnel and Flight Tests C95-209
Surface Reflective Visualization System Study to Vortical Flow over Delta Wings C95-210
Numerical Study of Alternate Forms of Dynamic-Stall-Vortex Suppression C95-220

Subsonic Flow

Aerodynamics of a Finite Wing with Simulated Ice C95-019
Aerodynamic Characteristics of External Store Configurations at Low Speeds C95-022
Cobra Maneuver Unsteady Aerodynamic Considerations C95-032
Influence of Sideslip on Double Delta Wing Aerodynamics C95-066
Quantifiable Vortex Features of F-106B Aircraft at Subsonic Speeds C95-069
Nonlinear Aerodynamic Analysis of Grid Fin Configurations C95-080
Navier–Stokes Applications to High-Lift Airfoil Analysis C95-090
Turbulent Effects on Parachute Drag C95-101
Flow Developments Above 50-Deg Sweep Delta Wings with Different Leading-Edge Profiles C95-118
Analysis of Tangential Slot Blowing on F/A-18 Isolated Forebody C95-159
Preconditioned Generalized Minimum Residual Acceleration of Panel Methods C95-179
Effects of Delta Planform Tip Sail Incidence and Arrangement on Wing Performance C95-181
Navier–Stokes Computations and Experimental Comparisons for Multielement Airfoil Configurations C95-195
Double-Delta-Wing Aerodynamics for Pitching Motions With and Without Sideslip C95-203

Supersonic Flow

Comment on "Physics of Coanda Jet Detachment at High-Pressure Ratio" C94-087
Comment on "Inverse Solutions of the Prandtl–Meyer Function" C94-221
Reply by the Authors to G. Emanuel C94-221
Natural Laminar Flow Wing Concept for Supersonic Transports C95-018
Estimation of Supersonic Leading-Edge Thrust by a Euler Flow Model C95-102
Computational Study of a Conical Unit Aspect Ratio Wing at Supersonic Speeds C95-131
Effects of Strakes on a Glancing Shock Wave/Turbulent Boundary-Layer Interaction C95-152
Viscous Flow Past a Nacelle in Proximity to a Flat Plate C95-172
Visualization of Choked Supersonic Flow-Through Engine Nacelles C95-174

Transonic Flow

Computation of Passively Controlled Transonic Wing C95-048
Analysis of Some Interference Effects in a Transonic Wind Tunnel C95-074
Comparison of the Predictive Capabilities of Several Turbulence Models C95-075
Numerical Analysis of the Vortical Flow Around a Delta Wing-Canard Configuration C95-108

Chronological Index

C94-060 Aircraft Landing Gear Positioning Concerning Abnormal Landing Cases. Hsing-Juin Lee, *National Chung-Hsing University, Taiwan, ROC*; and Cheng-Yi Chiou, *Chung Shan Institute of Science and Technology, Taiwan, ROC* (**31**, 2, p. 446) Engineering Note

Technical Comment by D. H. Chester, *TASHAN, I.A.I. Ltd., Israel* (**32**, 4, p. 904)

Reply (**32**, 4, p. 904)

C94-087 Physics of Coanda Jet Detachment at High-Pressure Ratio. Kenneth C. Cornelius and Gerald A. Lucius, *Wright State University* (**31**, 3, p. 591) Article

Technical Comment by George Emanuel, *University of Oklahoma* (**32**, 2, p. 456)

C94-148 Simple Equations for Helical Vortex Wakes. D. H. Wood, *University of Newcastle, Australia* (**31**, 4, p. 994) Engineering Note

Technical Comment by Alexander H. Flax, *National Academy of Engineering* (**32**, 6, p. 1413)

Reply (**32**, 6, p. 1413)

C94-221 Inverse Solutions of the Prandtl-Meyer Function. O. Özcan, F. O. Edis, A. R. Aslan, and I. Pinar, *Istanbul Technical University, Turkey* (**31**, 6, p. 1422) Engineering Note

Technical Comment by George Emanuel, *University of Oklahoma* (**32**, 5, p. 1168)

Reply (**32**, 5, p. 1168)

C95-001 Summary of an Active Flexible Wing Program. Boyd Perry III and Stanley R. Cole, *NASA Langley Research Center*; and Gerald D. Miller, *Rockwell International Corporation* (**32**, 1, p. 10) Article based on AIAA Paper 92-2080 CP923

C95-002 Application of Transonic Small Disturbance Theory to the Active Flexible Wing Model. Walter A. Silva and Robert M. Bennett, *NASA Langley Research Center* (**32**, 1, p. 16) Article

C95-003 Simulation and Model Reduction for the Active Flexible Wing Program. Carey Buttrill, Barton Bacon, Jennifer Heeg, and Jacob Houck, *NASA Langley Research Center*; and David Wood, *Unisys Government Systems, Inc.* (**32**, 1, p. 23) Article

C95-004 Multiple-Function Digital Controller System for Active Flexible Wing Wind-Tunnel Model. Sherwood T. Hoadley, *NASA Langley Research Center*; and Sandra M. McGraw, *Lockheed Engineering and Sciences Company, Inc.* (**32**, 1, p. 32) Article based on AIAA Paper 92-2023 CP921

C95-005 On-Line Analysis Capabilities Developed to Support the Active Flexible Wing Wind-Tunnel Tests. Carol D. Wieseman and Sherwood T. Hoadley, *NASA Langley Research Center*; and Sandra M. McGraw, *Lockheed Engineering and Sciences Company, Inc.* (**32**, 1, p. 39) Article

C95-006 Flutter Suppression Control Law Design and Testing for the Active Flexible Wing. Vivek Mukhopadhyay, *NASA Langley Research Center* (**32**, 1, p. 45) Article based on AIAA Paper 92-2095 CP923

C95-007 Design and Multifunction Tests of a Frequency Domain-Based Active Flutter Suppression System. William M. Adams Jr., *NASA Langley Research Center*; and David M. Christhilf, *Lockheed Engineering and Sciences Company, Inc.* (**32**, 1, p. 52) Article

C95-008 Flutter Suppression for the Active Flexible Wing: A Classical Design. M. R. Waszak, *NASA Langley Research Center*; and S. Srinathkumar, *National Aeronautical Laboratory, India* (**32**, 1, p. 61) Article

C95-009 Rolling Maneuver Load Alleviation Using Active Controls. Jessica A. Woods-Vedeler, *NASA Langley Research Center*; Anthony S. Pototzky, *Lockheed Engineering and Sciences Company, Inc.*; and Sherwood T. Hoadley, *NASA Langley Research Center* (**32**, 1, p. 68) Article based on AIAA Paper 92-2099 CP923

C95-010 Application of Navier-Stokes Aeroelastic Methods to Improve Fighter Wing Maneuver Performance. David M. Schuster, *Lockheed Engineering and Sciences Company, Inc.* (**32**, 1, p. 77) Article based on AIAA Paper 93-0529

C95-011 Effect of Curvature in the Numerical Simulation of an Electrothermal De-Icer Pad. J. R. Huang, Theo G. Keith Jr., and Kenneth J. De Witt, *University of Toledo* (**32**, 1, p. 84) Article

C95-012 Dynamic Investigation of the Angular Motion of a Rotating Body-Parachute System. D. Levin and Z. Shpund, *Technion—Israel Institute of Technology* (**32**, 1, p. 93) Article based on AIAA Paper 93-1205

C95-013 Tracking of Raindrops in Flow over an Airfoil. James R. Valentine and Rand A. Decker, *University of Utah* (**32**, 1, p. 100) Article based on AIAA Paper 93-0168

C95-014 Erosion of Dust-Filtered Helicopter Turbine Engines Part I: Basic Theoretical Considerations. Johannes P. van der Walt and Alan Nurick, *University of the Witwatersrand, South Africa* (**32**, 1, p. 106) Article

C95-015 Erosion of Dust-Filtered Helicopter Turbine Engines Part II: Erosion Reduction. Johannes P. van der Walt and Alan Nurick, *University of the Witwatersrand, South Africa* (**32**, 1, p. 112) Article

C95-016 Life Prediction of Helicopter Engines Fitted with Dust Filters. Johannes P. van der Walt and Alan Nurick, *University of the Witwatersrand, South Africa* (**32**, 1, p. 118) Article

C95-017 Stability Derivatives of a Flapped Plate in Unsteady Ground Effect. A. O. Nuhait and M. F. Zedan, *King Saud University, Saudi Arabia* (**32**, 1, p. 124) Article

C95-018 Natural Laminar Flow Wing Concept for Supersonic Transports. Berry T. Gibson and Heinz A. Gerhardt, *Northrop Grumman Corporation* (**32**, 1, p. 130) Article based on AIAA Paper 93-3466 CP935

C95-019 Aerodynamics of a Finite Wing with Simulated Ice. A. Khodadoust and M. B. Bragg, *University of Illinois at Urbana–Champaign* (**32**, 1, p. 137) Article

C95-020 Response of a Nonrotating Rotor Blade to Lateral Turbulence Part I: Theory. D. M. Tang and E. H. Dowell, *Duke University* (**32**, 1, p. 145) Article

C95-021 Response of a Nonrotating Rotor Blade to Lateral Turbulence Part II: Experiment. D. M. Tang and E. H. Dowell, *Duke University* (**32**, 1, p. 154) Article

C95-022 Aerodynamic Characteristics of External Store Configurations at Low Speeds. O. Özcan, M. F. Ünal, A. R. Aslan, Y. Bozkurt, and N. H. Aydin, *Istanbul Technical University, Turkey* (**32**, 1, p. 161) Article

C95-023 Real-Time Estimation of Atmospheric Turbulence Severity from In-Situ Aircraft Measurements. Larry B. Cornman, Corinne S. Morse, and Gary Cunning, *National Center for Atmospheric Research* (**32**, 1, p. 171) Article based on AIAA Paper 94-0268

C95-024 Neural Network Prediction of Three-Dimensional Unsteady Separated Flowfields. Scott J. Schreck, *Frank J. Seiler Research Laboratory*; and William E. Faller and Marvin W. Luttges, *University of Colorado* (**32**, 1, p. 178) Article based on AIAA Paper 93-3426 CP935

C95-025 Unsteady Ground Effects on Aerodynamic Coefficients of Finite Wings with Camber. A. O. Nuhait, *King Saud University, Saudi Arabia* (**32**, 1, p. 186) Article based on AIAA Paper 93-3423 CP935

C95-026 CFD Optimization of a Theoretical Minimum-Drag Body. Samson Cheung, Philip Aaronson, and Thomas Edwards, *NASA Ames Research Center* (**32**, 1, p. 193) Article based on AIAA Paper 93-3421 CP935

C95-027 Study of the Droplet Spray Characteristics of a Subsonic Wind Tunnel. Michael B. Bragg and Abdollah Khodadoust, *University of Illinois at Urbana–Champaign* (**32**, 1, p. 199) Article

C95-028 Digital Flutter Suppression of Active Flexible Wing Using Moment Feedback. Martin J. Klepl, *Rockwell International Corporation* (**32**, 1, p. 205) Engineering Note

C95-029 Maneuver Load Control Using Optimized Feedforward Commands. Doug Moore, *Rockwell International Corporation* (**32**, 1, p. 206) Engineering Note

C95-030 Circulation Control Wing Model Study. M. E. Franke, M. E. Pelletier, and J. W. Trainor, *U.S. Air Force Institute of Technology* (**32**, 1, p. 208) Engineering Note based on AIAA Paper 93-0094

C95-031 Simplified Tunnel Correction Method. Shojiro Shindo, *Kawada Industries, Inc., Japan* (**32**, 1, p. 210) Engineering Note

C95-032 Cobra Maneuver Unsteady Aerodynamic Considerations. Lars E. Ericsson (**32**, 1, p. 214) Engineering Note

C95-033 Pressure-Sensitive Paint Measurements on a Supersonic High-Sweep Oblique Wing Model. B. G. McLachlan, J. H. Bell, H. Park, R. A. Kennelly, J. A. Schreiner, S. C. Smith, and J. M. Strong, *NASA Ames Research Center*; and J. Gallery and M. Gouterman, *University of Washington* (**32**, 2, p. 217) Article based on AIAA Paper 92-2686

C95-034 Navier-Stokes Solutions for an Oscillating Double-Delta Wing. J. A. Ekaterinaris and Lewis B. Schiff, *NASA Ames Research Center* (**32**, 2, p. 228) Article based on AIAA Paper 91-1624

C95-035 Evolution of Airplane Gust Loads Design Requirements. J. R. Fuller, *Boeing Commercial Airplane Group* (**32**, 2, p. 235) Survey Paper

C95-036 Interpretation of Experimental High-Alpha Aerodynamics—Implications for Flight Prediction. Martin E. Beyers, *Institute for Aerospace Research, Canada* (**32**, 2, p. 247) Survey Paper based on AIAA Paper 94-0166

C95-037 CFD-Based Aerodynamic Approximation Concepts Optimization of a Two-Dimensional Scramjet Vehicle. Peter D. McQuade, Scott Eberhardt, and Eli Livne, *University of Washington* (**32**, 2, p. 262) Article

C95-038 Global Nonlinear Aerodynamic Modeling Using Multivariate Orthogonal Functions. Eugene A. Morelli, *Lockheed Engineering and Sciences Company, Inc.* (**32**, 2, p. 270) Article based on AIAA Paper 93-3636 CP937

C95-039 Wind-Tunnel Measurements of Hazard Posed by Lift-Generated Wakes. V. J. Rossow, J. N. Sacco, P. A. Askins, L. S. Bisbee, and S. M. Smith, *NASA Ames Research Center* (**32**, 2, p. 278) Article based on AIAA Paper 93-3518 CP935

C95-040 Added Mass of High-Altitude Balloons. W. J. Anderson, G. N. Shah, and Jungsun Park, *University of Michigan* (**32**, 2, p. 285) Article based on AIAA Paper 91-3693

C95-041 Multidisciplinary Design Integration Methodology for a Supersonic Transport Aircraft. A. R. Dovi and G. A. Wrenn, *Interdisciplinary Research Methods*; and J.-F. M. Barthelemy, P. G. Coen, and L. E. Hall, *NASA Langley Research Center* (**32**, 2, p. 290) Article based on AIAA Paper 92-4841 CP9213

C95-042 Analysis of Vortex Bursting Utilizing Three-Dimensional Laser Measurements. Kenneth C. Cornelius, *Wright State University* (**32**, 2, p. 297) Article based on AIAA Paper 90-3020 CP9010

C95-043 Wing Leading-Edge Design Concepts for Airbreathing Hypersonic Waveriders. Max L. Blosser, *NASA Langley Research Center*; Isaiah M. Blankson, *NASA Headquarters*; and Steve Schwoerke, Don Brunson, and Paul Hagseth, *Lockheed, Fort Worth Company* (**32**, 2, p. 307) Article based on AIAA Paper 94-0379

C95-044 Finite State Induced Flow Models Part I: Two-Dimensional Thin Airfoil. David A. Peters, *Washington University*; Swaminathan Karunamoorthy, *St. Louis University*; and Wen-Ming Cao, *Washington University* (**32**, 2, p. 313) Article

C95-045 Finite State Induced Flow Models Part II: Three-Dimensional Rotor Disk. David A. Peters, *Washington University*; and Cheng Jian He, *Advanced Rotorcraft Technology* (**32**, 2, p. 323) Article

C95-046 Multiple Order Pole Pure Lag Rational Function Approximations for Unsteady Aerodynamics. P. M. Mujumdar and N. Balan, *Indian Institute of Technology* (**32**, 2, p. 334) Article

C95-047 Aircraft with Single-Axis Aerodynamically Deployed Wings. Shlomo Djerassi and Shmuel Kotzev, *RAFAEL, Ministry of Defense, Israel* (**32**, 2, p. 343) Article based on AIAA Paper 93-3673 CP937

C95-048 Computation of Passively Controlled Transonic Wing. I. Kim and B. Sung, *Korea Aerospace Research Institute* (**32**, 2, p. 349) Article based on AIAA Paper 93-3474 CP935

C95-049 Impact of Aeroelastic-Propulsive Interactions on Flight Dynamics of a Hypersonic Vehicle. David L. Raney and John D. McMinn, *NASA Langley Research Center*; and Anthony S. Pototzky, *Lockheed Engineering and Sciences Company, Inc.* (**32**, 2, p. 355) Article based on AIAA Paper 93-1367 CP931

C95-050 Numerical Study of a Supersonic Open Cavity Flow and Pressure Oscillation Control. Yih Nen Jeng and Uon Jan Payne, *National Cheng Kung University, Taiwan, ROC* (**32**, 2, p. 363) Article

C95-051 Numerical Simulation of the Jet Produced by an Internal Aircraft Explosion. James A. Mundy, Donald P. Rizzetta, and Reid B. Melville, *U.S. Air Force Wright Laboratory* (**32**, 2, p. 370) Article based on AIAA Paper 94-1900

C95-052 Acoustic Spinning-Mode Analysis by an Iterative

Threshold Method. Daniel Blacodon, *ONERA, France* (**32**, 2, p. 377) Article

C95-053 **Hypersonic Inviscid and Viscous Flow over a Wedge and Cone.** K. K. Leung and G. Emanuel, *University of Oklahoma* (**32**, 2, p. 385) Article

C95-054 **Possible "Impossible" Turn.** David F. Rogers, *U.S. Naval Academy* (**32**, 2, p. 392) Article based on AIAA Paper 94-0271

C95-055 **Case for Aircraft with Outboard Horizontal Stabilizers.** J. A. C. Kentfield, *University of Calgary, Canada* (**32**, 2, p. 398) Article based on AIAA Paper 94-0498

C95-056 **Effect of Geometry and Mass Distribution on Tumbling Characteristics of Flying Wings.** C. M. Fremaux and D. M. Vairo, *Lockheed Engineering and Sciences Company, Inc.*; and R. D. Whipple, *NASA Langley Research Center* (**32**, 2, p. 404) Article

C95-057 **When In-Flight Simulation is Necessary.** Valerie J. Gawron and Philip A. Reynolds, *Calspan Corporation* (**32**, 2, p. 411) Article

C95-058 **Wing Flutter Boundary Prediction Using Unsteady Euler Aerodynamic Method.** Elizabeth M. Lee-Rausch and John T. Batina, *NASA Langley Research Center* (**32**, 2, p. 416) Article based on AIAA Paper 93-1422 CP931

C95-059 **Concurrent Engineering in Design of Aircraft Structures.** J. Krammer, O. Sensburg, J. Vilsmeier, and G. Berchtold, *Deutsche Aerospace, Germany* (**32**, 2, p. 423) Article

C95-060 **Multidisciplinary Optimization in Aircraft Design Using Analytic Technology Models.** Brett Malone and W. H. Mason, *Virginia Polytechnic Institute and State University* (**32**, 2, p. 431) Article based on AIAA Paper 91-3187

C95-061 **Robust and Efficient Trimming Algorithm for Application to Advanced Mathematical Models of Rotorcraft.** James Scott Gordon McVicar, *University of Glasgow, Scotland, UK*; and Roy Bradley, *Glasgow Caledonian University, Scotland, UK* (**32**, 2, p. 439) Engineering Note

C95-062 **Performance Benefit of Second Harmonic Control in Helicopters.** Amnon Katz, *University of Alabama* (**32**, 2, p. 442) Engineering Note

C95-063 **Ice Accretion on Aircraft Wings with Thermodynamic Effects.** P. Tran, M. T. Brahimi, and I. Paraschivoiu, *École Polytechnique de Montréal, Canada*; A. Pueyo, *University of Toronto, Canada*; and F. Tezok, *Bombardier Inc./Canadair, Canada* (**32**, 2, p. 444) Engineering Note based on AIAA Paper 94-0605

C95-064 **Applicability of Newtonian and Linear Theory to Slender Hypersonic Bodies.** Steven P. Kuester and John D. Anderson Jr., *University of Maryland* (**32**, 2, p. 446) Engineering Note

C95-065 **Aerodynamic Characteristics of Vortex Flaps on a Double-Delta Planform.** Lance W. Traub, *University of the Witwatersrand, South Africa* (**32**, 2, p. 449) Engineering Note

C95-066 **Influence of Sideslip on Double Delta Wing Aerodynamics.** Deborah S. Grismer, *U.S. Air Force Wright Laboratory*; Robert C. Nelson, *University of Notre Dame*; and Wayne L. Ely, *McDonnell Aircraft Company* (**32**, 2, p. 451) Engineering Note

C95-067 **Directional Stability of a Large Receiver Aircraft in Air-to-Air Refueling.** A. W. Bloy and K. A. Lea, *University of Manchester, England, UK* (**32**, 2, p. 453) Engineering Note

C95-068 **Numerical Investigation of High Incidence Flow over a Double-Delta Wing.** J. A. Ekaterinaris and R. L. Coutley, *U.S. Naval Postgraduate School*; Lewis B. Schiff, *NASA Ames Research Center*; and M. F. Platzer, *U.S. Naval Postgraduate School* (**32**, 3, p. 457) Article based on AIAA Paper 91-0753

C95-069 **Quantifiable Vortex Features of F-106B Aircraft at Subsonic Speeds.** John E. Lamar and Jay Brandon, *NASA Langley Research Center*; and Thomas D. Johnson Jr., *Lockheed Engineering and Sciences Company, Inc.* (**32**, 3, p. 464) Article based on AIAA Paper 93-3471 CP935

C95-070 **Aerodynamic Applications of Underexpanded Hypersonic Viscous Jets.** V. V. Riabov, *Worcester Polytechnic Institute* (**32**, 3, p. 471) Survey Paper based on AIAA Paper 94-2634

C95-071 **Jet Transport Response to a Horizontal Wind Vortex.** Darin R. Spilman and Robert F. Stengel, *Princeton University* (**32**, 3, p. 480) Article based on AIAA Paper 94-0811

C95-072 **Computation of Delta-Wing Roll Manuevers.** Raymond E. Gordnier, *U.S. Air Force Wright Laboratory* (**32**, 3, p. 486) Article based on AIAA Paper 93-2975

C95-073 **Spectral Mapping of Quasiperiodic Structures in a Vortex Flow.** James P. Hubner and Narayanan M. Komerath, *Georgia Institute of Technology* (**32**, 3, p. 493) Article based on AIAA Paper 93-2914

C95-074 **Analysis of Some Interference Effects in a Transonic Wind Tunnel.** Giovanni Lombardi, *University of Pisa, Italy*; and Mauro Morelli, *Council for Scientific and Industrial Research, South Africa* (**32**, 3, p. 501) Article

C95-075 **Comparison of the Predictive Capabilities of Several Turbulence Models.** Christopher L. Rumsey and Veer N. Vatsa, *NASA Langley Research Center* (**32**, 3, p. 510) Article based on AIAA Paper 93-0192

C95-076 **Event Correlation for Networked Simulators.** Amnon Katz, *University of Alabama* (**32**, 3, p. 515) Article

C95-077 **Correlation of Unsteady Pressure and Inflow Velocity Fields of a Pitching Rotor Blade.** Mihir K. Lal, S. G. Liou, G. A. Pierce, and N. M. Komerath, *Georgia Institute of Technology* (**32**, 3, p. 520) Article based on AIAA Paper 93-3082

C95-078 **In-Flight Pressure Measurements on a Subsonic Transport High-Lift Wing Section.** Long P. Yip, *NASA Langley Research Center*; Paul M. H. W. Vijgen, *High Technology Corporation*; Jay D. Hardin, *Lockheed Engineering and Sciences Company, Inc.*; and C. P. van Dam, *University of California, Davis* (**32**, 3, p. 529) Article

C95-079 **Cooling of Aerospace Plane Using Liquid Hydrogen and Methane.** Ahmed Z. Al-Garni, Ahmet Z. Şahin, Bekir S. Yılbaş, and Saad A. Ahmed, *King Fahd University of Petroleum and Minerals, Saudi Arabia* (**32**, 3, p. 539) Article

C95-080 **Nonlinear Aerodynamic Analysis of Grid Fin Configurations.** John E. Burkhalter, Roy J. Hartfield, and Todd M. Leleux, *Auburn University* (**32**, 3, p. 547) Article

C95-081 **Actuated Forebody Strake Controls for the F-18 High-Alpha Research Vehicle.** Daniel G. Murri, Gautam H. Shah, and Daniel J. DiCarlo, *NASA Langley Research Center*; and Todd W. Trilling, *Lockheed Engineering and Sciences Company, Inc.* (**32**, 3, p. 555) Article based on AIAA Paper 93-3675 CP937

C95-082 **Prediction of Airplane States.** Amnon Katz and Kenneth Graham, *University of Alabama* (**32**, 3, p. 563) Article

C95-083 Statistical Discrete Gust–Power Spectral Density Methods Overlap—Holistic Proof and Beyond. Robert P. Chen, *Allied-Signal Aerospace Company* (**32**, 3, p. 570) Article based on AIAA Paper 94-1724 CP943

C95-084 Fundamentals of Catastrophic Failure Prevention by Thrust Vectoring. B. Gal-Or, V. Sherbaum, and M. Lichtsinder, *Technion—Israel Institute of Technology* (**32**, 3, p. 577) Article

C95-085 Operational and Research Aspects of a Radio-Controlled Model Flight Test Program. Gerald D. Budd, *NASA Dryden Flight Research Center*; and Ronald L. Gilman and David Eichstedt, *PRC, Inc.* (**32**, 3, p. 583) Article

C95-086 Signal Processing of Noise Data from High-Speed Flyovers. Jeffrey J. Kelly and Mark R. Wilson, *Lockheed Engineering and Sciences Company, Inc.* (**32**, 3, p. 590) Article based on AIAA Paper 93-0736

C95-087 Directional Control at High Angles of Attack Using Blowing Through a Chined Forebody. A. S. Arena Jr., *Oklahoma State University*; R. C. Nelson, *University of Notre Dame*; and L. B. Schiff, *NASA Ames Research Center* (**32**, 3, p. 596) Article based on AIAA Paper 93-3624 CP937

C95-088 Flow Physics of Critical States for Rolling Delta Wings. Lars E. Ericsson (**32**, 3, p. 603) Article based on AIAA Paper 93-3683 CP937

C95-089 Assessment of Technology for Aircraft Development. J. S. Shang, *U.S. Air Force Wright Laboratory* (**32**, 3, p. 611) Article based on AIAA Paper 94-2543

C95-090 Navier–Stokes Applications to High-Lift Airfoil Analysis. Walter O. Valarezo, *McDonnell Douglas Aerospace*; and Dimitri J. Mavriplis, *NASA Langley Research Center* (**32**, 3, p. 618) Article based on AIAA Paper 93-3534 CP935

C95-091 Analysis of Low Reynolds Number Airfoil Flows. J. A. Ekaterinaris, M. S. Chandrasekhara, and M. F. Platzer, *U.S. Naval Postgraduate School* (**32**, 3, p. 625) Article based on AIAA Paper 94-0534

C95-092 Flight Test Certification of Primary Category Aircraft Using TP101-41E Sportplane Design Standard. M. W. Anderson, *Federal Aviation Administration* (**32**, 3, p. 631) Article based on AIAA Paper 94-2156 CP947

C95-093 Free Vibration of Composite Beams—an Exact Method Using Symbolic Computation. J. R. Banerjee, *City University, England, UK*; and F. W. Williams, *University of Wales College of Cardiff, Wales, UK* (**32**, 3, p. 636) Article

C95-094 Damage Tolerance Certification of a Fighter Horizontal Stabilizer. Jia-Yen Huang, Ming-Yang Tsai, Jong-Sheng Chen, and Ching-Long Ong, *Aeronautical Research Laboratory, Taiwan, ROC* (**32**, 3, p. 643) Article

C95-095 Lift-Enhancing Tabs on Multielement Airfoils. James C. Ross, *NASA Ames Research Center*; Bruce L. Storms, *Sterling Software*; and Paul G. Carrannanto, *Ford Motor Company* (**32**, 3, p. 649) Article based on AIAA Paper 93-3504 CP935

C95-096 Structural Integrity of Fuselage Panels with Multisite Damage. Jai H. Park, Ripudaman Singh, Chang R. Pyo, and Satya N. Atluri, *Georgia Institute of Technology* (**32**, 3, p. 656) Article

C95-097 Pilot Study of Metal Volume Fraction Approach for Fiber/Metal Laminates. H. F. Wu and L. L. Wu, *Alcoa Technical Center*; and W. J. Slagter and J. L. Verolme, *Delft University of Technology, The Netherlands* (**32**, 3, p. 663) Article

C95-098 Fatigue Design of Axially Loaded Semicircular Lugs. S. K. Tsang, *Dowty Aerospace Los Angeles* (**32**, 3, p. 672) Article

C95-099 Optimal Trajectories for an Unmanned Air-Vehicle in the Horizontal Plane. Joseph Z. Ben-Asher, *Taas-Israel Industries, Ltd.* (**32**, 3, p. 677) Engineering Note based on AIAA Paper 92-4344 CP929

C95-100 Effect of Leading-Edge Extension Fences on the Vortex Wake of an F/A-18 Model. Sheshagiri K. Hebbar and Max F. Platzer, *U.S. Naval Postgraduate School*; and William D. Frink, *CAS, Inc.* (**32**, 3, p. 680) Engineering Note based on AIAA Paper 93-0868

C95-101 Turbulent Effects on Parachute Drag. Mayer Humi, *Worcester Polytechnic Institute* (**32**, 3, p. 682) Engineering Note

C95-102 Estimation of Supersonic Leading-Edge Thrust by a Euler Flow Model. C. de Nicola, R. Tognaccini, and P. Visingardi, *University of Naples, Italy*; and L. Paparone, *Centro Italiano Ricerche Aerospaziali, Italy* (**32**, 3, p. 684) Engineering Note based on AIAA Paper 94-1821

C95-103 Computation of Vortex Breakdown on a Rolling Delta Wing. Raymond E. Gordnier, *U.S. Air Force Wright Laboratory* (**32**, 3, p. 686) Engineering Note based on AIAA Paper 93-2975

C95-104 Estimating Noise Characteristics from Flight Test Data Using Optimal Fourier Smoothing. Eugene A. Morelli, *Lockheed Engineering and Sciences Company, Inc.* (**32**, 4, p. 689) Article based on AIAA Paper 94-0152

C95-105 Economic Parameters in the Conceptual Design Optimization of an Air-Taxi Aircraft. R. K. Pant, S. D. Gogate, and P. Arora, *Indian Institute of Technology* (**32**, 4, p. 696) Article based on AIAA Paper 94-4301 CP9413

C95-106 Design Analysis Methodology for Solar-Powered Aircraft. Steven A. Brandt, *U.S. Air Force Academy*; and Fred T. Gilliam, *University of Texas at Austin* (**32**, 4, p. 703) Article

C95-107 Natural-Laminar-Flow Airfoil for General-Aviation Applications. Michael S. Selig, *University of Illinois at Urbana–Champaign*; Mark D. Maughmer, *Pennsylvania State University*; and Dan M. Somers, *Airfoils, Inc.* (**32**, 4, p. 710) Article

C95-108 Numerical Analysis of the Vortical Flow Around a Delta Wing-Canard Configuration. A. Das and J. M. A. Longo, *DLR, German Aerospace Research Establishment* (**32**, 4, p. 716) Article

C95-109 Parameter Identification and Modeling of Longitudinal Aerodynamics. J. W. Aksteter, *Science Applications International Corporation*; E. K. Parks, *University of Arizona*; and R. E. Bach Jr., *NASA Ames Research Center* (**32**, 4, p. 726) Article based on AIAA Paper 94-2147 CP947

C95-110 Evaluation of Several Agility Metrics for Fighter Aircraft Using Optimal Trajectory Analysis. George W. Ryan III, *PRC, Inc.*; and David R. Downing, *University of Kansas* (**32**, 4, p. 732) Article based on AIAA Paper 93-3646 CP937

C95-111 Vortex Control over Sharp-Edged Slender Bodies. D. Gangulee and T. Terry Ng, *University of Toledo* (**32**, 4, p. 739) Article

C95-112 Subsonic Wing Planform Design Using Multidisciplinary Optimization. Sean Wakayama and Ilan Kroo, *Stanford University* (**32**, 4, p. 746) Article

C95-113 Unstructured Adaptive Mesh Computations of Rot-

orcraft High-Speed Impulsive Noise. Roger C. Strawn and Rupak Biswas, *NASA Ames Research Center*; and Michael Garceau, *Stanford University* (**32**, 4, p. 754) Article based on AIAA Paper 93-4359

C95-114 Inlet Acoustic Mode Measurements Using a Continuously Rotating Rake. Laurence J. Heidelberg, *NASA Lewis Research Center*; and David G. Hall, *NYMA, Inc.* (**32**, 4, p. 761) Article based on AIAA Paper 93-0598

C95-115 Monitoring Airplane Takeoff Performance: Prototype Instrument with Learning Capability. M. W. Milligan, M. M. Zhou, and H. J. Wilkerson, *University of Tennessee* (**32**, 4, p. 768) Article based on AIAA Paper 94-1929 CP946

C95-116 Critical Considerations for Helicopters During Runway Takeoffs. Yiyuan Zhao, *University of Minnesota*; and Robert T. N. Chen, *NASA Ames Research Center* (**32**, 4, p. 773) Article based on AIAA Paper 94-3695 CP948

C95-117 Near Real-Time Approach to Statistical Flight Test. Brian L. Jones, *U.S. Air Force Institute of Technology* (**32**, 4, p. 782) Article based on AIAA Paper 94-3511 CP949

C95-118 Flow Developments Above 50-Deg Sweep Delta Wings with Different Leading-Edge Profiles. J. J. Miau, K. T. Kuo, W. H. Liu, S. J. Hsieh, and J. H. Chou, *National Cheng Kung University, Taiwan, ROC*; and C. K. Lin, *Chung Shan Institute of Science and Technology, Taiwan, ROC* (**32**, 4, p. 787) Article

C95-119 Stability Derivatives for a Hypersonic Caret-Wing Waverider. Christopher Tarpley and Mark J. Lewis, *University of Maryland* (**32**, 4, p. 795) Article based on AIAA Paper 93-0508

C95-120 Delta Wing Vortex Control via Recessed Angled Spanwise Blowing. H. Johari, D. J. Olinger, and K. C. Fitzpatrick, *Worcester Polytechnic Institute* (**32**, 4, p. 804) Article based on AIAA Paper 93-3246

C95-121 Computational Investigation of Tangential Slot Blowing on a Generic Chined Forebody. Roxana M. Agosta-Greenman, *California Polytechnic State University*; Ken Gee, *MCAT, Inc.*; Russell M. Cummings, *California Polytechnic State University*; and Lewis B. Schiff, *NASA Ames Research Center* (**32**, 4, p. 811) Article based on AIAA Paper 94-3475 CP949

C95-122 Experimental Investigation of Tangential Slot Blowing on a Generic Chined Forebody. Russell M. Cummings, *California Polytechnic State University*; Lewis B. Schiff, *NASA Ames Research Center*; and John D. Duino, *California Polytechnic State University* (**32**, 4, p. 818) Article based on AIAA Paper 94-3477 CP949

C95-123 Neural Network Approach to Fatigue-Crack-Growth Predictions Under Aircraft Spectrum Loadings. R. M. V. Pidaparti and M. J. Palakal, *Purdue University at Indianapolis* (**32**, 4, p. 825) Article

C95-124 Vortex Breakdown Control by Delta Wing Geometry. M. V. Lowson and A. J. Riley, *Bristol University, England, UK* (**32**, 4, p. 832) Article based on AIAA Paper 94-3487 CP949

C95-125 Drag Prediction at Subsonic and Transonic Speeds Using Euler Methods. C. P. van Dam, K. Nikfetrat, and K. Wong, *University of California, Davis*; and P. M. H. W. Vijgen, *High Technology Corporation* (**32**, 4, p. 839) Article

C95-126 Computation of a Controlled Store Separation from a Cavity. Christopher A. Atwood, *NASA Ames Research Center* (**32**, 4, p. 846) Article based on AIAA Paper 94-0031

C95-127 Structural Dynamic Loads in Response to Impulsive Excitation. Mordechay Karpel and Eyal Presente, *Technion—Israel Institute of Technology* (**32**, 4, p. 853) Article

C95-128 Aeroelastic Effects on the B-2 Maneuver Response. B. A. Winther, D. A. Hagemeyer, R. T. Britt, and W. P. Rodden, *Northrop Grumman Corporation* (**32**, 4, p. 862) Article based on AIAA Paper 93-3664 CP937

C95-129 Aeroelastic Analysis of a Flexible Control Surface with Structural Nonlinearity. In Lee and Seung-Ho Kim, *Korea Advanced Institute of Science and Technology* (**32**, 4, p. 868) Article

C95-130 Canard Tip Vortex Splitting in a Canard–Wing Configuration: Experimental Observations. G. Lombardi, *University of Pisa, Italy* (**32**, 4, p. 875) Engineering Note

C95-131 Computational Study of a Conical Unit Aspect Ratio Wing at Supersonic Speeds. Brian E. McGrath, *Lockheed Engineering and Sciences Company, Inc.* (**32**, 4, p. 877) Engineering Note based on AIAA Paper 93-3505 CP935

C95-132 Generating Image Filters for Target Recognition by Hebbian Neural Network Learning. Alan Katz and Philip Thrift, *Texas Instruments Incorporated* (**32**, 4, p. 880) Engineering Note based on AIAA Paper 93-2704

C95-133 Inertia-Coupled Coordinated Roll Maneuvers of Airplanes. N. Ananthkrishnan and K. Sudhakar, *Indian Institute of Technology* (**32**, 4, p. 883) Engineering Note

C95-134 Effects of Spanwise Blowing on a Delta Wing with Vortex Flaps. Lance W. Traub, *University of the Witwatersrand, South Africa* (**32**, 4, p. 884) Engineering Note

C95-135 Probe Interference on Flow Measurements in Propeller near Slipstream. Lars H. Öhman and Vinh D. Nguyen, *National Research Council, Canada*; and David J. Barber, *De Havilland, Inc., Canada* (**32**, 4, p. 887) Engineering Note

C95-136 Genetic Algorithms Applied to the Aerodynamic Design of Transonic Airfoils. Domenico Quagliarella, *Centro Italiano Ricerche Aerospaziali, Italy*; and Antonio Della Cioppa, *Consiglio Nazionale delle Ricerche, Italy* (**32**, 4, p. 889) Engineering Note based on AIAA Paper 94-1896 CP946

C95-137 Dihedral for Spiral Stability. Amnon Katz, *University of Alabama* (**32**, 4, p. 891) Engineering Note

C95-138 Stable Cross-Type Parachute with Inflation Aid. Karl-Friedrich Doherr, *DLR, German Aerospace Research Establishment* (**32**, 4, p. 894) Engineering Note based on AIAA Paper 93-1201

C95-139 Forebody Vortex Control Using Nose-Boom Strakes. Limin Chen and T. Terry Ng, *University of Toledo*; and Brooke Smith, *Eidetics International, Inc.* (**32**, 4, p. 896) Engineering Note

C95-140 Shape Sensitivity Analysis of Divergence Dynamic Pressure. M. Bhardwaj and R. K. Kapania, *Virginia Polytechnic Institute and State University* (**32**, 4, p. 898) Engineering Note

C95-141 Improvement of Transonic Wing Buffet by Geometric Modifications. Shen-Jwu Su, *Aero Industry Development Center, Taiwan, ROC*; and Chuen-Yen Chow, *University of Colorado* (**32**, 4, p. 901) Engineering Note based on AIAA Paper 93-3024

C95-142 Experimental and Analytical Investigation of Transonic Limit-Cycle Oscillations of a Flaperon. C. Edward Lan and Yenpu Chen, *University of Kansas*; and Kun-Jan Lin, *Aero Industry Development Center, Taiwan, ROC* (**32**, 5, p. 905) Article

C95-143 Rotor Aerodynamic Loads Computation Using a Constant Vorticity Contour Free Wake Model. Todd R. Quackenbush, Daniel A. Wachspress, and Alexander H. Boschitsch, *Continuum Dynamics, Inc.* (**32**, 5, p. 911) Article

C95-144 Study of the Pressure Distribution on an Aircraft Tire–Wheel Interface. James A. Sherwood, *University of Massachusetts–Lowell*; and Barry K. Fussell, William R. Edwards, Todd S. Gross, and David W. Watt, *University of New Hampshire* (**32**, 5, p. 921) Article

C95-145 Pitch Rate and Pitch-Axis Location Effects on Vortex Breakdown Onset. Miguel R. Visbal and Raymond E. Gordnier, *U.S. Air Force Wright Laboratory* (**32**, 5, p. 929) Article based on AIAA Paper 94-0538

C95-146 Compressibility Effects on Vortex Breakdown Onset Above a 75-Degree Sweep Delta Wing. Miguel R. Visbal and Raymond E. Gordnier, *U.S. Air Force Wright Laboratory* (**32**, 5, p. 936) Article based on AIAA Paper 94-0538

C95-147 Momentum, Pressure, and Energy in the Trefftz-Plane. Gerrit Schouten, *Delft University of Technology, The Netherlands* (**32**, 5, p. 943) Article

C95-148 Effect of Blade-Tip Planform on Shock Wave of Advancing Helicopter Blade. Takashi Aoyama, *National Aerospace Laboratory, Japan*; Keiji Kawachi, *University of Tokyo, Japan*; and Shigeru Saito, *National Aerospace Laboratory, Japan* (**32**, 5, p. 955) Article

C95-149 Vortex-in-Cell Analysis of Wing Wake Roll-Up. Renato S. Ribeiro, *Empresa Brasileira de Aeronáutica, Brazil*; and Ilan Kroo, *Stanford University* (**32**, 5, p. 962) Article

C95-150 Aerodynamics and Acoustics of Rotor Blade-Vortex Interactions. Yung H. Yu, Chee Tung, and Judith Gallman, *NASA Ames Research Center*; Klaus J. Schultz and Berend van der Wall, *DLR, German Aerospace Research Establishment*; and Pierre Spiegel and Bertrand Michea, *ONERA, France* (**32**, 5, p. 970) Article based on AIAA Paper 93-4332

C95-151 Analysis of Rolled Delta Wing Flows Using Effective Sweep and Attack Angles. Eric J. Stephen, *Frank J. Seiler Research Laboratory* (**32**, 5, p. 978) Article

C95-152 Effects of Strakes on a Glancing Shock Wave/Turbulent Boundary-Layer Interaction. S. Koide, C. J. W. Griesel, and J. L. Stollery, *Cranfield University, England, UK* (**32**, 5, p. 985) Article

C95-153 Acoustics of a Counter-Rotating Shrouded Propfan: Prediction and Data. Klaus Heinig, Fritz Kennepohl, and Paul Traub, *MTU Motoren- und Turbinen-Union München GmbH, Germany* (**32**, 5, p. 993) Article

C95-154 Inverse Method for Airfoil Design. Alejandro C. Limache, *Universidad Nacional de Córdoba, Argentina* (**32**, 5, p. 1001) Article

C95-155 De-Dopplerization of Aircraft Acoustic Signals. Jeffrey J. Kelly and Mark R. Wilson, *Lockheed Engineering and Sciences Company, Inc.* (**32**, 5, p. 1012) Article based on AIAA Paper 93-0737

C95-156 Vortex Asymmetry and Induced Side Forces on Elliptic Cones at High Incidence. P. R. Viswanath, *National Aerospace Laboratories, India* (**32**, 5, p. 1018) Article

C95-157 Decomposition-Based Optimization Procedure for High-Speed Prop-Rotors Using Composite Tailoring. Aditi Chattopadhyay, Thomas R. McCarthy, and Charles E. Seeley, *Arizona State University* (**32**, 5, p. 1026) Article

C95-158 Wing Performance in Moderate Rain. B. E. Thompson, J. Jang, and J. L. Dion, *Rensselaer Polytechnic Institute* (**32**, 5, p. 1034) Article

C95-159 Analysis of Tangential Slot Blowing on F/A-18 Isolated Forebody. Ken Gee, Yehia M. Rizk, and Lewis B. Schiff, *NASA Ames Research Center* (**32**, 5, p. 1040) Article based on AIAA Paper 94-1831 CP946

C95-160 Matched-Filter and Stochastic-Simulation-Based Methods of Gust Loads Prediction. Robert C. Scott, *NASA Langley Research Center*; Anthony S. Pototzky, *Lockheed Engineering and Sciences Company, Inc.*; and Boyd Perry III, *NASA Langley Research Center* (**32**, 5, p. 1047) Article based on AIAA Paper 93-1365 CP931

C95-161 Development of Transonic Area-Rule Methodology. Wayne D. Carlsen, *George Washington University and NASA Langley Research Center* (**32**, 5, p. 1056) Article based on AIAA Paper 94-1841 CP946

C95-162 Experimental Investigation of a Three-Dimensional Dynamic Stall Model Oscillating in Pitch. D. M. Tang and E. H. Dowell, *Duke University* (**32**, 5, p. 1062) Article

C95-163 Experimental Study of Lift-Enhancing Tabs on a Two-Element Airfoil. Bruce L. Storms, *Sterling Software*; and James C. Ross, *NASA Ames Research Center* (**32**, 5, p. 1072) Article based on AIAA Paper 94-1868 CP946

C95-164 Evaluation of Blockage Interference on Propellers in a Perforated-Wall Wind Tunnel. M. Mokry, *National Research Council of Canada* (**32**, 5, p. 1079) Article

C95-165 Application of an Artificial Neural Network as a Flight Test Data Estimator. Roger L. McMillen, *Raytheon Aircraft Company*; and James E. Steck and Kamran Rokhsaz, *Wichita State University* (**32**, 5, p. 1088) Article

C95-166 Co- and Contrarotating Streamwise Vortices in a Turbulent Boundary Layer. Xin Zhang, *University of Southampton, England, UK* (**32**, 5, p. 1095) Article based on AIAA Paper 93-3035

C95-167 Analytic Sensitivity and Approximation of Skin Buckling Constraints in Wing-Shape Synthesis. Eli Livne and Radomir Milosavljevic, *University of Washington* (**32**, 5, p. 1102) Article

C95-168 Structural Modeling for Optimization of Low Aspect Ratio Composite Wings. L. Meirovitch and T. J. Seitz, *Virginia Polytechnic Institute and State University* (**32**, 5, p. 1114) Article

C95-169 Equilibrium of Bolted Joints Subjected to In-Plane External Loading. Paul D. Haines, *Mathstat Ltd.* (**32**, 5, p. 1124) Article

C95-170 Aeroelastic Actuation Using Elastic and Induced Strain Anisotropy. Charrissa Y. Lin and Edward F. Crawley, *Massachusetts Institute of Technology* (**32**, 5, p. 1130) Article based on AIAA Paper 94-1386 CP942

C95-171 Asymptotic Expression of the Forces Induced by a Strong Jet in a Crossflow. A. Dyment and J. P. Flodrops, *ONERA–IMFL, France* (**32**, 5, p. 1138) Engineering Note

C95-172 Viscous Flow Past a Nacelle in Proximity to a Flat Plate. Kamran Fouladi, *Lockheed Engineering and Sciences Company, Inc.* (**32**, 5, p. 1140) Engineering Note

C95-173 Wedge-Cone Waverider Configuration for Engine-Airframe Integration. Naruhisa Takashima and Mark J. Lewis, *University of Maryland* (**32**, 5, p. 1142) Engineering Note

C95-174 Visualization of Choked Supersonic Flow-Through Engine Nacelles. Eddie Irani, *Wichita State University* (**32**, 5, p. 1144) Engineering Note

C95-175 Origin of Computed Unsteadiness in the Shear Layer of Delta Wings. Miguel R. Visbal and Raymond E. Gordnier, *U.S. Air Force Wright Laboratory* (**32**, 5, p. 1146) Engineering Note

C95-176 Oscillatory Behavior of Helicopter Rotor Airloads in the Blade Stall Regime. K. V. Truong and J. J. Costes, *ONERA, France* (**32**, 5, p. 1148) Engineering Note

C95-177 Effects of Large Blockage in Wind-Tunnel Testing. Joseph Katz and Robert Walters, *San Diego State University* (**32**, 5, p. 1149) Engineering Note based on AIAA Paper 95-0438

C95-178 Unstructured Euler Flutter Analysis of Two-Dimensional Wing–Tail Configuration. Dartzi Pan and Jen-Chieh Cheng, *National Cheng Kung University, Taiwan, ROC* (**32**, 5, p. 1152) Article based on AIAA Paper 94-0284

C95-179 Preconditioned Generalized Minimum Residual Acceleration of Panel Methods. Santhosh P. Koruthu, *Aeronautical Development Agency, India* (**32**, 5, p. 1155) Engineering Note

C95-180 Effect of Canard Oscillations on an X-31A-Like Model in Pitching Maneuver. Sheshagiri K. Hebbar, Max F. Platzer, and Da-Ming Liu, *U.S. Naval Postgraduate School* (**32**, 5, p. 1157) Engineering Note based on AIAA Paper 93-3427 CP935

C95-181 Effects of Delta Planform Tip Sail Incidence and Arrangement on Wing Performance. Lance W. Traub, *University of the Witwatersrand, South Africa* (**32**, 5, p. 1160) Engineering Note

C95-182 Wall Temperature Effects on the Stability of Laminar Boundary Layers. C. F. Lo, R. Lafrance, and W. S. Meredith, *University of Tennessee Space Institute*; and L. S. King, *NASA Ames Research Center* (**32**, 5, p. 1162) Engineering Note

C95-183 Wake Integration to Predict Wing Span Loading from a Numerical Simulation. Donovan L. Mathias, *California Polytechnic State University*; James C. Ross, *NASA Ames Research Center*; and Russell M. Cummings, *California Polytechnic State University* (**32**, 5, p. 1165) Engineering Note

C95-184 Transonic Aeroelastic Models of Highly Swept Hypersonic Lifting Surfaces. Edmund Pendleton and Greg Moster, *U.S. Air Force Wright Laboratory*; and Donald Keller, *NASA Langley Research Center* (**32**, 6, p. 1169) Article based on AIAA Paper 94-1489 CP942

C95-185 Real-Time Model of Three-Dimensional Dynamic Reattachment Using Neural Networks. William E. Faller, Scott J. Schreck, and Hank E. Helin, *U.S. Air Force Academy* (**32**, 6, p. 1177) Article based on AIAA Paper 94-2337

C95-186 Rear Fuselage Flow Studies on a Modern Transonic Transport Aircraft. E. Coustols, S. Prudhomme, and A. Mignosi, *CERT/ONERA, France*; and D. Destarac, *ONERA, France* (**32**, 6, p. 1183) Article

C95-187 Dynamic Airfoil Flow Separation and Reattachment. Lars E. Ericsson (**32**, 6, p. 1191) Article

C95-188 Trailing Vortex Effects on Large Receiver Aircraft. A. W. Bloy and M. Jouma'a, *University of Manchester, England, UK* (**32**, 6, p. 1198) Article

C95-189 Flat Spin of Axisymmetric Bodies. L. E. Ericsson; and M. E. Beyers, *Institute for Aerospace Research, Canada* (**32**, 6, p. 1205) Article based on AIAA Paper 94-0168

C95-190 Neural Network Prediction and Control of Three-Dimensional Unsteady Separated Flowfields. William E. Faller, *Johns Hopkins University*; Scott J. Schreck, *U.S. Air Force Academy*; and Marvin W. Luttges, *University of Colorado* (**32**, 6, p. 1213) Article based on AIAA Paper 94-0532

C95-191 Wing Rock Analysis of Slender Delta Wings, Review and Extension. Lars E. Ericsson (**32**, 6, p. 1221) Article based on AIAA Paper 95-0317

C95-192 Navier–Stokes Computations on Full Wing–Body Configuration with Oscillating Control Surfaces. Shigeru Obayashi, Ing-Tsau Chiu, and Guru P. Guruswamy, *NASA Ames Research Center* (**32**, 6, p. 1227) Article based on AIAA Paper 93-3687 CP937

C95-193 Grid Sensitivity and Aerodynamic Optimization of Generic Airfoils. Ideen Sadrehaghighi, *Old Dominion University*; Robert E. Smith, *NASA Langley Research Center*; and Surendra N. Tiwari, *Old Dominion University* (**32**. 6, p. 1234) Article

C95-194 Computational Inlet-Fairing Effects and Plume Characterization on a Hypersonic Powered Model. Lawrence D. Huebner, *NASA Langley Research Center* (**32**, 6, p. 1240) Article based on AIAA Paper 93-3041

C95-195 Navier–Stokes Computations and Experimental Comparisons for Multielement Airfoil Configurations. W. Kyle Anderson, Daryl L. Bonhaus, Robert J. McGhee, and Betty S. Walker, *NASA Langley Research Center* (**32**, 6, p. 1246) Article based on AIAA Paper 93-0645

C95-196 Validation of Vortex–Lattice Method for Loads on Wings in Lift-Generated Wakes. Vernon J. Rossow, *NASA Ames Research Center* (**32**, 6, p. 1254) Article based on AIAA Paper 94-1839 CP946

C95-197 Batch Simulation Environment for Integrated Batch and Piloted Air Combat Analysis. Kenneth H. Goodrich and John W. McManus, *NASA Langley Research Center*; and Alan R. Chappell, *Lockheed Engineering and Sciences Company, Inc.* (**32**, 6, p. 1263) Article based on AIAA Paper 92-4145 CP211

C95-198 Efficient Parametrization of Generic Aircraft Geometry. Malcom I. G. Bloor and Michael J. Wilson, *University of Leeds, England, UK* (**32**, 6, p. 1269) Article

C95-199 Rotor Free-Wake Modeling Using a Pseudoimplicit Relaxation Algorithm. Ashish Bagai and J. Gordon Leishman, *University of Maryland* (**32**, 6, p. 1276) Article based on AIAA Paper 94-1918 CP946

C95-200 Unsteady Characteristics of a Hypersonic Type IV Shock Interaction. Charles A. Lind and Mark J. Lewis, *University of Maryland* (**32**, 6, p. 1286) Article based on AIAA Paper 94-2945

C95-201 Practical Design of an Airship. Yuan Mao Huang and S. W. Chang, *National Taiwan University, Taiwan, ROC* (**32**, 6, p. 1294) Article

C95-202 Center of Gravity and Minimal Lift Coefficient Limits of a Gliding Parachute. Gil Iosilevskii, *Technion—Israel Institute of Technology* (**32**, 6, p. 1297) Article

C95-203 Double-Delta-Wing Aerodynamics for Pitching Motions With and Without Sideslip. Deborah S. Grismer, *U. S. Air Force Wright Laboratory*, and Robert C. Nelson, *University of Notre Dame* (**32**, 6, p. 1303) Article

C95-204 Accuracy of a Propeller Model in Inviscid Flow. Per Lötstedt, *Saab Military Aircraft, Sweden* (**32**, 6, p. 1312) Article

C95-205 Computational Estimate of the Separation Effect. Vlad Arie Gaton and Mark Harmatz, *RAFAEL, Ministry of Defense, Israel* (**32**, 6, p. 1322) Article based on AIAA Paper 95-0061

C95-206 Aeroelastic Optimization of a Helicopter Rotor with Composite Coupling. Ranjan Ganguli and Inderjit Chopra, *University of Maryland* (**32**, 6, p. 1326) Article

C95-207 Multipoint Approach for Aerodynamic Modeling in Complex Flowfields. Paul T. Jaramillo and M. G. Nagati, *Wichita State University* (**32**, 6, p. 1335) Article based on AIAA Paper 94-3470 CP949

C95-208 Conservative Multiblock Navier–Stokes Solver for Arbitrarily Deforming Geometries. Jaakko Hoffren, Timo Siikonen, and Seppo Laine, *Helsinki University of Technology, Finland* (**32**, 6, p. 1342) Article

C95-209 Correlation of F/A-18 Buffeting from Wind-Tunnel and Flight Tests. D. E. Bean and B. H. K. Lee, *National Research Council, Canada* (**32**, 6, p. 1351) Article based on AIAA Paper 94-1800

C95-210 Surface Reflective Visualization System Study to Vortical Flow over Delta Wings. S. R. Donohoe, E. M. Houtman, and W. J. Bannink, *Delft University of Technology, The Netherlands* (**32**, 6, p. 1359) Article based on AIAA Paper 94-2480

C95-211 Sizing Methodology for Reaction-Driven, Stopped-Rotor Vertical Takeoff and Landing Concepts. William A. Crossley, *Arizona State University*; and John W. Rutherford, *McDonnell Douglas Helicopter Company* (**32**, 6, p. 1367) Article based on AIAA Paper 93-4856

C95-212 Nonlinear Analysis of Graphite/Epoxy Wing Boxes Under Pure Bending Including Lateral Pressure. Giulio Romeo and Giacomo Frulla, *Politecnico di Torino, Italy* (**32**, 6, p. 1375) Article

C95-213 D-Box Fixture for Testing Stiffened Panels in Compression and Pressure. Damodar R. Ambur, *NASA Langley Research Center*; Jeffrey A. Cerro, *Lockheed Engineering and Sciences Company, Inc.*; and John Dickson, *Analytical Services and Materials, Inc.* (**32**, 6, p. 1382) Article based on AIAA Paper 94-1345 CP942

C95-214 Effects of a Closely Coupled Static and Oscillating Canard. R. M. Howard, J. M. Kersh Jr., D. C. Schmidt, and D. G. McBane, *U.S. Naval Postgraduate School* (**32**, 6, p. 1390) Engineering Note based on AIAA Paper 91-3222 CP918

C95-215 Network Load in Distributed Interactive Simulation. Kuo-Chi Lin, *University of Central Florida*; and Daniel E. Schab, *U.S. Naval Air Warfare Center* (**32**, 6, p. 1392) Engineering Note

C95-216 Vortex Burst Model for the Vortex Lattice Method. Steven A. Brandt, *U.S. Air Force Academy* (**32**, 6, p. 1394) Engineering Note based on AIAA Paper 94-0074

C95-217 Kill Probability in Antiaircraft Firing Theory. Marek Radomski, *Warsaw University of Technology, Poland* (**32**, 6, p. 1396) Engineering Note

C95-218 Simulation of DD-963 Ship Airwake by Navier–Stokes Method. Tsze C. Tai, *U.S. Naval Surface Warfare Center*, and Dean Carico, *U.S. Naval Air Warfare Center* (**32**, 6, p. 1399) Engineering Note based on AIAA Paper 93-3002

C95-219 Computation of Compressible, Laminar Boundary Layers on Swept, Tapered Wings. Harry P. Horton, *University of London, England, UK*; and Hans-Werner Stock, *Dornier Luftfahrt GmbH, Germany* (**32**, 6, p. 1402) Engineering Note

C95-220 Numerical Study of Alternate Forms of Dynamic-Stall-Vortex Suppression. M. C. Towne and T. A. Buter, *U.S. Air Force Institute of Technology* (**32**, 6, p. 1405) Article

C95-221 Estimation of the Moment Coefficients for Dynamically Scaled, Free-Spinning Wind-Tunnel Models. C. M. Fremaux, *Lockheed Engineering and Sciences Company, Inc.* (**32**, 6, p. 1407) Engineering Note

C95-222 Validation of a Multipoint Approach for Modeling Spin Aerodynamics. Paul T. Jaramillo, Yongseung Cho, and M. G. Nagati, *Wichita State University* (**32**, 6, p. 1409) Engineering Note
